TITLE : PORTABLE TELEPHONE SET

ABSTRACT : PROBLEM TO BE SOLVED: To provide the portable telephone set by which a portrait image of a caller or the like during absence of the user is displayed according to a priority decided optionally by the user.

SOLUTION: Telephone numbers of specific opposite parties are registered as registration numbers. Data of still images of portraits obtained by a digital video camera or the like are stored in a flash memory 120. Each registration number and each display priority in cross reference with each of image data are stored in a RAM 100 as a display priority table. Each caller telephone number of each incoming call to which the called party gives no reply is stored in the RAM 100 as an incoming call history list. The incoming call history list and the display priority are compared and whether or not the registration number is included in the list is checked. As a result of the check, the image data corresponding to the registration number included in the list are read in the order of higher priority and outputted on a display device.
